FOR IMMEDIATE RELEASE

ORF On A Roll in VBSpam Testing

BUDAPEST - June 1st, 2011 - Vamsoft ORF, leading software based anti-spam solution for Microsoft® Exchange and IIS SMTP achieved VBSpam Verified award for the 9th test period in a row.

The independent test conducted by Virus Bulletin's Anti-spam team included 23 popular spam filtering solutions from around the world. The aim of the testing is to benchmark available spam filters in their ability to protect inboxes from the onslaught of spam e-mails. The testing and verification procedure has become an industry standard in the measuring and benchmarking the efficiency of anti-spam solutions.

With one of the highest catch rates to date, ORF managed to attain the 9th VBSpam Verified certificate in a row from Virus Bulletin's VBSpam program. The recent round of tests included hundreds of legitimate newsletters in various languages and topics to better simulate real life email traffic. Not only ORF has adopted to the changing test conditions without any tweaking, it managed to improve its catch rate performance to 99.25%.

"Vamsoft prides itself on having very few false positives, and no doubt its developers will consider the two legitimate emails missed this month to be two too many. We like this attitude, and with a higher final score than last time (as both the FP rate and the SC rate improved), and the product's ninth VBSpam award in as many tests, they will be motivated to make further improvements." said **Martijn Grooten**, Anti-spam Test Director at Virus Bulletin.

Only two legitimate emails were blocked, resulting in a commendable 0.05% false positive rate.

"We initially signed up to the VBSpam tests to gain insight into how ORF fares against similar products. Over the last 9 tests periods our initial expectations were greatly exceeded with the unprecedented false positive record in the program. The results of this test period prompts us to see where we can further improve our product and deliver the high performing solution our customers have come to expect." commented **Peter Karsai**, Product Development Director of ORF.

About ORF

ORF is a spam filtering solution developed by Vamsoft Ltd., an independent Hungarian software developer since 2002. ORF provides a vast range of tools for Microsoft® Exchange and IIS SMTP to correctly identify spam especially in a multi language environment.

ORF also comes with intuitive and detailed reporting features which enable system administrators to overview and manage spam threats with unprecedented ease. ORF is sold to 94 countries around the world to SMBs to Enterprise level companies and governmental institutions.

About VBSpam

After more than a decade of experience in the field of anti-malware testing, Virus Bulletin began running an anti-spam testing and certification scheme at the beginning of 2009. The VBSpam test has since become a recognized industry standard.

The test uses Virus Bulletin's live email stream, which is sent to all the filters participating in the test in random order, thus exposing each to exactly the same email stream, in real time. The test

measures both the false positive rate and the spam catch rate of the products, and VBSpam certifications are awarded to products that exceed a predefined benchmark based on both measurements.
