

FOR IMMEDIATE RELEASE

ORF Pitches 6th No-hitter in 10 Games

BUDAPEST - November 24th, 2011 - Vamsoft ORF, leading software based anti-spam solution for Microsoft® Exchange and IIS SMTP achieved VBSpam Verified award for the 10th test period in a row.

The independent test conducted by Virus Bulletin's Anti-spam team included 22 popular spam filtering solutions from around the world. The aim of the testing is to benchmark available spam filters in their ability to protect inboxes from the onslaught of spam e-mails. The testing and verification procedure has become an industry standard in the measuring and benchmarking the efficiency of anti-spam solutions.

ORF once again proved its exceptional performance by completing another round of tests with 0.00% false positives. This is the 6th test in 10 periods that ORF manage to completely avoid falsely classifying legitimate emails as spam. ORF is unrivalled in this regard amongst the cream of spam filtering products.

"It is good when filter developers include well-designed quarantine systems in their filters, but it is even better when their products avoid false positives in the first place." said **Martijn Grooten**, Anti-spam Test Director at Virus Bulletin.

Along with this outstanding score, ORF also achieved a 99.17% spam catch rate.

"ORF has a unique combination of best-in-breed technologies which have been proven to be highly effective in indentifying spam while efficiently avoiding misclassifications. This unique combination of technologies manages to adapt seamlessly to the ever changing spam landscape without the need for regular maintenance from the administrator. This is highlighted by the fact that we haven't touched the configuration on the test server since the start of the test and still managed to stay in the front of the pack." said **Gyula Karakas**, CEO of Vamsoft Ltd.

About ORF

ORF is a spam filtering solution developed by Vamsoft Ltd., an independent Hungarian software developer since 2002. ORF provides a vast range of tools for Microsoft® Exchange and IIS SMTP to correctly identify spam especially in a multi language environment.

ORF also comes with intuitive and detailed reporting features which enable system administrators to overview and manage spam threats with unprecedented ease. ORF is sold to 94 countries around the world to SMBs to Enterprise level companies and governmental institutions.

About VBSpam

After more than a decade of experience in the field of anti-malware testing, Virus Bulletin began running an anti-spam testing and certification scheme at the beginning of 2009. The VBSpam test has since become a recognized industry standard.

The test uses Virus Bulletin's live email stream, which is sent to all the filters participating in the test in random order, thus exposing each to exactly the same email stream, in real time. The test measures both the false positive rate and the spam catch rate of the products, and VBSpam

certifications are awarded to products that exceed a predefined benchmark based on both measurements.
